Belousov, V.M., see Bogutskaya, L.V. 309
Biaglow, A., see Srinivasan, S. 271
Bogutskaya, L.V., Palchevskaya, T.A., Zyuzya, L.A. and Belousov, V.M.
Activation of *cis*-$ReOBr_3(PPh_3)_2$ by means of photoimmobilization 309
Castillo, M., see Ramírez, J. 317
Castillo, P., see Ramírez, J. 317
Cedeño, L., see Ramírez, J. 317
Centi, G. and Perathoner, S.
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Cuevas, R., see Ramírez, J. 317
Datye, A.K., see Srinivasan, S. 271
Datye, A.K., see Srinivasan, S. 289
Gorte, R., see Srinivasan, S. 271
Guijarro, M.I., Mendioroz, S. and Muñoz, V.
Deactivation by fouling of a new catalyst for the low temperature Claus process 335
Hamada, H., see Sasaki, M. 261
Ito, T., see Sasaki, M. 261
Kintaichi, Y., see Sasaki, M. 261
López-Agudo, A., see Ramírez, J. 317
Mendioroz, S., see Guijarro, M.I. 335
Muñoz, V., see Guijarro, M.I. 335
Narayanan, C.R., see Srinivasan, S. 271
Narayanan, C.R., see Srinivasan, S. 289
Palacios, J.M., see Ramírez, J. 317
Palchevskaya, T.A., see Bogutskaya, L.V. 309
Perathoner, S., see Centi, G. 179
Perez, G., see Stefanis, A.D. 353
Ramírez, J., Castillo, P., Cedeño, L., Cuevas, R., Castillo, M., Palacios, J.M. and López-Agudo, A.
Effect of boron addition on the activity and selectivity of hydrotreating $CoMo/Al_2O_3$ catalysts 317
Sasaki, M., Hamada, H., Kintaichi, Y. and Ito, T.
Application of a neural network to the analysis of catalytic reactions Analysis of NO decomposition over Cu/ZSM-5 zeolite 261
Srinivasan, S., Narayanan, C.R., Biaglow, A., Gorte, R. and Datye, A.K.
The role of sodium and structure on the catalytic behavior of alumina: I. Isopropanol dehydration activity 271
Srinivasan, S., Narayanan, C.R. and Datye, A.K.
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
Stefanis, A.D., Perez, G., Ursini, O. and Tomlinson, A.A.G.
PLS versus zeolites as sorbents and catalysts II. Terpene conversions in alumina-pillared clays and phosphates and medium pore zeolites 353
Tomlinson, A.A.G., see Stefanis, A.D. 353
Ursini, O., see Stefanis, A.D. 353
Zyuzya, L.A., see Bogutskaya, L.V. 309

Applied Catalysis A: General 132 (1995) 369–370

APPLIED CATALYSIS A: GENERAL

Subject Index

Activation
Activation of *cis*-$ReOBr_3(PPh_3)_2$ by means of photoimmobilization 309
Active sites on alumina
The role of sodium and structure on the catalytic behavior of alumina: I. Isopropanol dehydration activity 271
Alumina
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
Effect of boron addition on the activity and selectivity of hydrotreating $CoMo/Al_2O_3$ catalysts 317
Alumina surface reactivity
The role of sodium and structure on the catalytic behavior of alumina: I. Isopropanol dehydration activity 271
Back-propagation
Application of a neural network to the analysis of catalytic reactions Analysis of NO decomposition over Cu/ZSM-5 zeolite 261
Boron
Effect of boron addition on the activity and selectivity of hydrotreating $CoMo/Al_2O_3$ catalysts 317
Carbocations
PLS versus zeolites as sorbents and catalysts II. Terpene conversions in alumina-pillared clays and phosphates and medium pore zeolites 353
Chemisorption
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Cobalt–molybdenum
Effect of boron addition on the activity and selectivity of hydrotreating $CoMo/Al_2O_3$ catalysts 317
Conversions
PLS versus zeolites as sorbents and catalysts II. Terpene conversions in alumina-pillared clays and phosphates and medium pore zeolites 353
Copper-based catalysts
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Cu/ZSM-5
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Cu-zeolites
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Design of catalysts
Application of a neural network to the analysis of catalytic reactions Analysis of NO decomposition over Cu/ZSM-5 zeolite 261
Desulphurization
Deactivation by fouling of a new catalyst for the low temperature Claus process 335
Flue gases
Deactivation by fouling of a new catalyst for the low temperature Claus process 335
Fouling
Deactivation by fouling of a new catalyst for the low temperature Claus process 335
Graphical explanation
Application of a neural network to the analysis of catalytic reactions Analysis of NO decomposition over Cu/ZSM-5 zeolite 261
Hydrogenation
Activation of *cis*-$ReOBr_3(PPh_3)_2$ by means of photoimmobilization 309
Hydrotreating
Effect of boron addition on the activity and selectivity of hydrotreating $CoMo/Al_2O_3$ catalysts 317
Hydroxyls
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
IR spectroscopy
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
Isopropanol dehydration
The role of sodium and structure on the catalytic

behavior of alumina: I. Isopropanol dehydration activity 271
N_2O
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Neural network
Application of a neural network to the analysis of catalytic reactions Analysis of NO decomposition over Cu/ZSM-5 zeolite 261
Nitric oxide decomposition
Application of a neural network to the analysis of catalytic reactions Analysis of NO decomposition over Cu/ZSM-5 zeolite 261
Nitrogen oxides
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
NO reduction
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
NO_x
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Photoimmobilization
Activation of *cis*-$ReOBr_3(PPh_3)_2$ by means of photoimmobilization 309
PILCs
PLS versus zeolites as sorbents and catalysts II. Terpene conversions in alumina-pillared clays and phosphates and medium pore zeolites 353
Pyridine
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
Reaction mechanism
Nature of active species in copper-based catalysts and their chemistry of transformation of nitrogen oxides 179
Rhenium complex
Activation of *cis*-$ReOBr_3(PPh_3)_2$ by means of photoimmobilization 309
Sepiolite
Deactivation by fouling of a new catalyst for the low temperature Claus process 335
Sodium effect
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
Sodium impurities
The role of sodium and structure on the catalytic behavior of alumina: I. Isopropanol dehydration activity 271
Super-Claus
Deactivation by fouling of a new catalyst for the low temperature Claus process 335
Surface sites
The role of sodium and structure on the catalytic behavior of alumina: II. IR spectroscopy 289
Temperature-programmed desorption of 2-propanol on alumina
The role of sodium and structure on the catalytic behavior of alumina: I. Isopropanol dehydration activity 271
Terpenes
PLS versus zeolites as sorbents and catalysts II. Terpene conversions in alumina-pillared clays and phosphates and medium pore zeolites 353
Zeolites
PLS versus zeolites as sorbents and catalysts II. Terpene conversions in alumina-pillared clays and phosphates and medium pore zeolites 353
